

Código pra mover o Form clicando em qualquer parte dele e arrastando.
A mesma logica vale pra mover objetos dentro do formulário.

Em C#:

Primeiro defina a estrutura:

CODE

```
public struct MoveForm
{
    public int X;
    public int Y;
}
```

Agora dentro da sua classe do formulário:

CODE

```
MoveForm mv = new MoveForm();

private void Form1_MouseDown(object sender, MouseEventArgs e)
{
    if (e.Button != MouseButtons.Left) return;
    mv.X = this.Left - MousePosition.X;
    mv.Y = this.Top - MousePosition.Y;
}

private void Form1_MouseMove(object sender, MouseEventArgs e)
{
    if (e.Button != MouseButtons.Left) return;
    this.Left = mv.X + MousePosition.X;
    this.Top = mv.Y + MousePosition.Y;
}
```

Em VB.NET:

Primeiro defina a estrutura:

CODE

```
Structure MoveForm
    Dim X As Integer
    Dim Y As Integer
End Structure
```

agora dentro da sua classe do formulário:

CODE

```
Dim mv As MoveForm

Private Sub Form1_MouseDown(ByVal sender As Object, ByVal e As
System.Windows.Forms.MouseEventArgs) Handles Me.MouseDown
    If e.Button <> Windows.Forms.MouseButtons.Left Then Exit Sub
    mv.X = Me.Left - MousePosition.X
    mv.Y = Me.Top - MousePosition.Y
End Sub

Private Sub Form1_MouseMove(ByVal sender As Object, ByVal e As
System.Windows.Forms.MouseEventArgs) Handles Me.MouseMove
    If e.Button <> Windows.Forms.MouseButtons.Left Then Exit Sub
    Me.Left = mv.X + MousePosition.X
    Me.Top = mv.Y + MousePosition.Y
End Sub
```
